Subject lead ppmillion

I would like to weigh in on the proposed change to the clean-up of lead in contaminated yards in Omaha, Ne. I believe we should lower the amount of lead which would trigger clean-up to 400 parts per million and thus clean up more yards. The health of our children is a precious asset. I thank you for extending the time period for public input. Sincerely, Pam Sorrell 5030 S. 79 Ave. Omaha 68127
